**IDENTIFICATION OF PECULIARITIES OF FUNCTIONING OF THE REGIONAL
COMPLEX OF THE REPUBLIC OF CRIMEA**

The effective functioning of the national economy should be ensured by achieving sustainable development of the country's regions, which can be realized as a result of the rational use of the potential of the region's business activity. Moreover, each region is characterized by specific features that can have both a beneficial effect and a negative impact on the economy of the region, on the possibility of achieving the goals of socio-ecological and economic development and, as a result, the well-being of the population.

To identify the features of the functioning of the regional complex, the article took into account the main components of the model of the economic functioning of the region: a functional block that unites functional subsystems of the region, and an institutional regional block that unites public authorities and administration, as well as methods, means, mechanisms of management
